

High-Efficiency Reverse Osmosis System

Efficient. Compact. Designed for better drinking water.

Why Matrix75

- 75 GPD high-efficiency reverse osmosis membrane
- Approximately 1:1 purified-water-to-drain-water ratio under proper conditions
- Dual catalytic carbon filtration for chlorine and chloramine reduction
- 5-micron sediment prefiltration
- Hygienically sealed replacement cartridges
- Compact under-sink design with a dedicated drinking-water faucet

75

GPD

1:1

EFFICIENCY

4

STAGES

FOUR STAGES FOR BETTER DRINKING WATER

1

5-Micron Sediment

Helps capture dirt, sand, rust, silt and other suspended particles.

2

Catalytic Carbon

Helps reduce chlorine, chloramines, taste, odor and common organic contaminants.

3

RO Membrane

Helps reduce TDS and common dissolved contaminants including lead, fluoride, nitrates and arsenic.

4

Catalytic Carbon

Final polishing stage for clean taste and odor before water reaches the faucet.

Designed for San Diego-area water conditions

Performance varies with incoming water pressure, temperature, TDS and overall system conditions.

Cleaner Water. Simple Maintenance.

Designed to make high-quality reverse osmosis filtration easy to own and maintain.

What the Matrix75 is designed to reduce

- Total Dissolved Solids (TDS)
- Lead and other heavy metals
- Fluoride and nitrates
- Arsenic
- PFAS/PFOA
- Microplastics
- Chlorine and chloramines through catalytic carbon prefiltration

Reduction performance varies by contaminant and operating conditions.

Recommended Service Intervals

Sediment pre-filter	About 12 months
Catalytic carbon pre-filter	About 12 months
Catalytic carbon post-filter	About 12 months
RO membrane	Typically 3-5 years

Actual filter and membrane life depends on incoming water quality, usage and maintenance history.

High efficiency without sacrificing simplicity

1:1

PURIFIED WATER : DRAIN WATER

The Matrix75 is designed to operate at approximately a 1:1 ratio under appropriate operating conditions - significantly more efficient than many traditional reverse osmosis systems.

OPTIONAL ALKALINE UPGRADE

Remineralization finishing stage

Available for customers who want minerals added back after RO, with a finishing stage designed to increase pH and improve taste and mouthfeel.

Faucet Options

**Matte Black, Brushed Gold, and Oil Rubbed Bronze are premium finish upgrades available for an additional charge.*

Easy annual service

The annual replacement pack includes the sediment filter and both catalytic carbon filters. The RO membrane is replaced separately based on performance and water conditions.
